### **DETAILED ACTION**

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 3-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Spitz et al. (US 6060776), hereinafter Spitz.

Regarding claim 1, Fig. 1 of Spitz shows a diode (100) comprising a connecting means (8;a wire) and a heat sink base (a region below the wire 8);

said connecting means comprising a flat end (7) fixed at a die (4) and the other end having no fixed shape;

said heat sink base comprising;

a base (2) which is on the bottom of the heat sink base;

a press-fit region (11) which is around said base (2);

a solder platform (3) which is above said base;

a die (4) which has a first side and a second side electrically coupled to said flat end (7) and said solder platform (3), respectively;

a shoulder (15) which is extended acclivitously from said solder platform, the root of said shoulder connected to said solder platform having a kink; and

a cup (9) which is extended upwardly from the periphery of said base (2).

Regarding claim 3, Spitz discloses said connecting means is a lead wire (col. 3, line 22).

Regarding claim 4, Fig. 1 of Spitz shows the diode further comprises two solder layers (5a) and (5b) which sandwich said die (4) above and under, respectively.

Regarding claim 5, Fig. 1 of Spitz shows the diode further comprises passivative material (14) used to surround said wafer (4).

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2 and 6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Spitz in view of Spitz et al. (US 6667545), hereinafter Spitz'545.

Regarding claim 2, Fig. 1 of Spitz shows substantially the entire claimed structure except "said shoulder has a height which is substantially the same as said die." Fig. 6 of Spitz shows a shoulder has a height which is substantially the same as the die. It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the teachings of Spitz'545 to the device of Spitz in order to have a height of the shoulder substantially the same as the die for the tension relief as taught in col. 4, lines 24-43. Also, note that Figures 3-5 of Spitz'535 show of a shoulder with a various height and an angle. Therefore, a variation in the height of the shoulder would have been obvious matter of an optimized design configuration since such a modification would have involved a mere change in the shape of a component. A

Art Unit: 2811

change in shape is generally recognized as being within the level of ordinary skill in the art. In re Dailey, 357 F.2d 669, 149 USPQ 47 (CCPA 1966).

Regarding claim 6, Fig. 1 of Spitz shows substantially the entire claimed structure except "an epoxy surrounding outside said passivative material." Spitz'545 discloses the diode further comprises a resin (44; col. 3, line 11) for surrounding outside said passivative material (38). It would have been obvious to one of ordinary skill in the art at the time of the invention to incorporate the teachings of Spitz'545 to the device of Spitz in order to have an epoxy encapsulating material since an epoxy resin is most widely used packaging material.

Regarding claim 7, Fig. 1 of Spitz shows the diode further comprises a protective sheath (12) for surrounding the encapsulating material (13) inside said cup.

Regarding claim 8, Fig. 1 of Spitz shows further comprises a protective sheath (12) for surrounding the encapsulating material (13) outside said cup (9).

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Junghwa M. Im whose telephone number is (571) 272-1655. The examiner can normally be reached on MON.-FRI. 8:30AM-5:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Eddie C Lee can be reached on (571) 272-1732. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
